Purpose

Washington State Transit Insurance Pool (the Pool or WSTIP) has retained PricewaterhouseCoopers LLP (PwC) to provide an actuarial review of the Pool's self-insurance program.

In this report, we provide:

1. Unpaid claim estimate as of December 31, 2021
2. Perspective on capital adequacy as of December 31, 2021
3. Projected loss and loss rates for accident year 2022 at various confidence levels
4. Estimate of the Pool's ceded losses and comparison with WSTIP's excess premium

Each of these items is estimated as of the December 31, 2021 accounting date based on data valued as of December 31, 2021. We continued to receive information and supplemental data from the Pool through February 23, 2022; none of this additional information and data reflects activity between the valuation date of the data and the date it was provided.

References to the term "loss" should be understood to mean loss and allocated loss adjustment expense (ALAE). These expenses would include the costs of adjusting claims, such as legal expense, that are assigned to specific cases. Unallocated loss adjustment expenses (ULAE) are expenses not assigned to specific cases (e.g., claims administration costs).

The estimates in this report are actuarial central estimates which represent the expected value over the range of reasonably possible outcomes. This report and supporting work papers document the procedures and results of PwC's analysis.

Our Services were performed, and this Deliverable was prepared, for the sole use and benefit of, and pursuant to a client relationship exclusively with WSTIP. PwC is providing no opinion, attestation or other form of assurance and disclaims any contractual or other responsibility to others based on their access to or use of the Deliverable. Accordingly, the information in this Deliverable may not be relied upon by anyone other than WSTIP.

The procedures performed throughout this engagement were advisory in nature and were performed under the American Academy of Actuaries Code of Professional Conduct and Actuarial Standards of Practice. The procedures performed did not constitute an audit, a review, examination, or other form of attestation or assurance as those terms are defined by the AICPA. Accordingly, we do not express any form of assurance. Any use of the term "review" within this report should be interpreted in the common use of that term, and not in the definition of "review" promulgated by the AICPA. Also, this report/work product does not constitute a legal opinion or advice.

Background

The Pool began its self-insurance program on January 1, 1989 and currently consists of 25 member transit systems. Table 1 shows the dates when each member joined the Pool.

Table 1 – Current Pool members

| Transit system | Join date |
|---------------------------------------|-------------------|
| Ben Franklin Transit | January 1, 1989 |
| Clallam Transit System | January 1, 1989 |
| Community Transit | January 1, 1989 |
| Grays Harbor Transportation Authority | January 1, 1989 |
| Intercity Transit | January 1, 1989 |
| Island Transit | August 13, 1992 |
| Jefferson Transit | January 1, 1989 |
| Kitsap Transit | January 1, 1989 |
| Link Transit | December 4, 1990 |
| Mason Transit Authority | January 1, 1993 |
| Pacific Transit System | January 1, 1989 |
| Skagit Transit | August 1, 1993 |
| Whatcom Transportation Authority | December 19, 1995 |
| Grant Transit Authority | February 1, 1997 |
| Pullman Transit | January 1, 2003 |
| Spokane Transit Authority | July 1, 2004 |
| Valley Transit | December 1, 2004 |
| Columbia County Public Transportation | February 7, 2005 |
| Cowlitz County Transit | March 13, 2005 |
| Everett Transit | May 1, 2005 |
| Yakima Transit | September 1, 2005 |
| Asotin County PBTA | July 1, 2007 |
| Pierce Transit | January 1, 2009 |
| C-Tran | January 1, 2011 |
| Central Transit | January 1, 2020 |

The purpose for forming the Pool was to provide member transit systems with programs of joint self-insurance, joint purchasing of insurance and joint contracting for hiring personnel to provide risk management, claims handling, training and administrative services. Coverages provided by the Pool include: automobile liability, general liability, auto physical damage, and property.

A primary objective of the Pool is to provide stable rates and budget stability to its membership. Maintaining a sufficiently strong net position mitigates the impact to the membership of the various financial stresses inherent with insurance operations. While the Pool maintains the ability to replenish capital through a retroactive assessment, such a strategy is inconsistent with its financial goals. Capital adequacy is assessed using a capital modeling approach consistent with insurance and pooling standards.

The Pool's governing body consists of its Board of Directors, which is comprised of one representative and at least one alternate from each member system. The Board of Directors meets four times a year. The Executive Committee consists of the Pool's officers (President, Vice President, Secretary and Past President), a representative from each size transit agency group (small, medium, and large) and one additional representative (at large) which can be from any size agency. The Pool's appointed Treasurer also sits on the Executive Committee as a non-voting member. Once elected as Secretary, the positions roll up through the ranks until rolling off as Past President. The member representatives (large, medium, small, and at large) are elected annually. The Executive Committee handles the day-to-day governance of WSTIP and also serves as the Claim Review Committee in all cases involving indemnity reserves greater than \$250,000. The Executive Committee meets almost monthly. Member systems joining the Pool must remain members for a minimum of three years. A member may withdraw from the Pool at the end of any fiscal year by giving six months written notice of its intent to withdraw. No member may withdraw within its first three years of membership. Any member withdrawing from the Pool may not be allowed to rejoin the Pool for a period of three years.

The Pool has historically purchased excess insurance and reinsurance above its self-insured retentions (SIR). Loss and ALAE are combined for the purposes of establishing the Pool's retention for any one occurrence. Claims are handled internally. Historical auto and general liability amounts retained by the Pool are presented in Table 2.

Table 2 - Historical liability retentions

| Loss period | Amount retained |
|--------------------|--|
| 1/1/89-12/31/92 | \$250,000 per occ. |
| 1/1/93 - 12/31/94 | \$300,000 per occ. |
| 1/1/95 - 12/31/96 | \$300,000 per occ. plus \$200,000 agg. deductible of layer in excess of \$300,000 |
| 1/1/97 - 12/31/98 | \$300,000 per occ. plus \$400,000 agg. deductible of layer \$200,000 excess of \$300,000 |
| 1/1/99 - 12/31/00 | \$250,000 per occ. |
| 1/1/01 - 12/31/02 | \$250,000 per occ. plus \$250,000 agg. deductible of layer in excess of \$250,000 |
| 1/1/03 - 12/31/03 | \$500,000 per occ. |
| 1/1/04 - 12/31/05 | \$600,000 per occ. |
| 1/1/06 - 12/31/07 | \$1 million per occ. |
| 1/1/08 - 2/31/08 | \$1 million per occ. plus 33% of losses \$3 million excess of \$1 million |
| 1/1/09 - 12/31/10 | \$1 million per occ. plus \$500,000 agg. deductible of layer in excess of \$1 million |
| 1/1/11 - 12/31/14 | \$1 million per occ. plus 17% of losses \$3 million excess of \$1 million |
| 1/1/15 - 12/31/16 | \$2 million per occ. |
| 1/1/17 – 12/31/19 | \$2.5 million per occ. |
| 1/1/20 – present | \$2 million per occ. |

For general liability losses occurring during 1996 through 1998, the aggregate corridor deductibles do not apply.

All member systems have a \$5,000 deductible for Public Officials Liability claims. These types of claims have been infrequent historically; they are included in the general liability analysis.

The Pool's more recent retention levels for first-party losses are presented in Table 3.

Table 3 – Recent first party Pool retention levels

| Loss period | APD | Property |
|--------------------|------------|-----------------|
| 1/1/03 – 6/30/11 | \$100,000 | \$100,000 |
| 7/1/11 – 6/30/12 | \$250,000 | \$250,000 |
| 7/1/12 – 6/30/13 | \$500,000 | \$500,000 |
| 7/1/13 - present | \$250,000 | \$250,000 |

Property deductibles are \$5,000 for all members except C-Tran (\$10,000 deductible), Pierce Transit (\$25,000 deductible), and Spokane Transit (\$25,000 deductible); Central Transit, Yakima Transit, Pullman Transit and Everett Transit do not purchase property coverage through the Pool.

Auto physical damage deductibles are \$5,000 for all members except C-Tran (\$10,000 deductible), Pierce Transit (\$25,000 deductible), and Spokane Transit (\$25,000 deductible); Central Transit, Pullman Transit and Everett Transit do not purchase APD coverage through the Pool. UIM is first dollar coverage.

The Pool operates with an annual planning and budgeting cycle. Fiscal years run from January 1 through December 31. The liability coverage year follows the fiscal year whereas the first party coverage year runs from July 1 through June 30.

Key findings

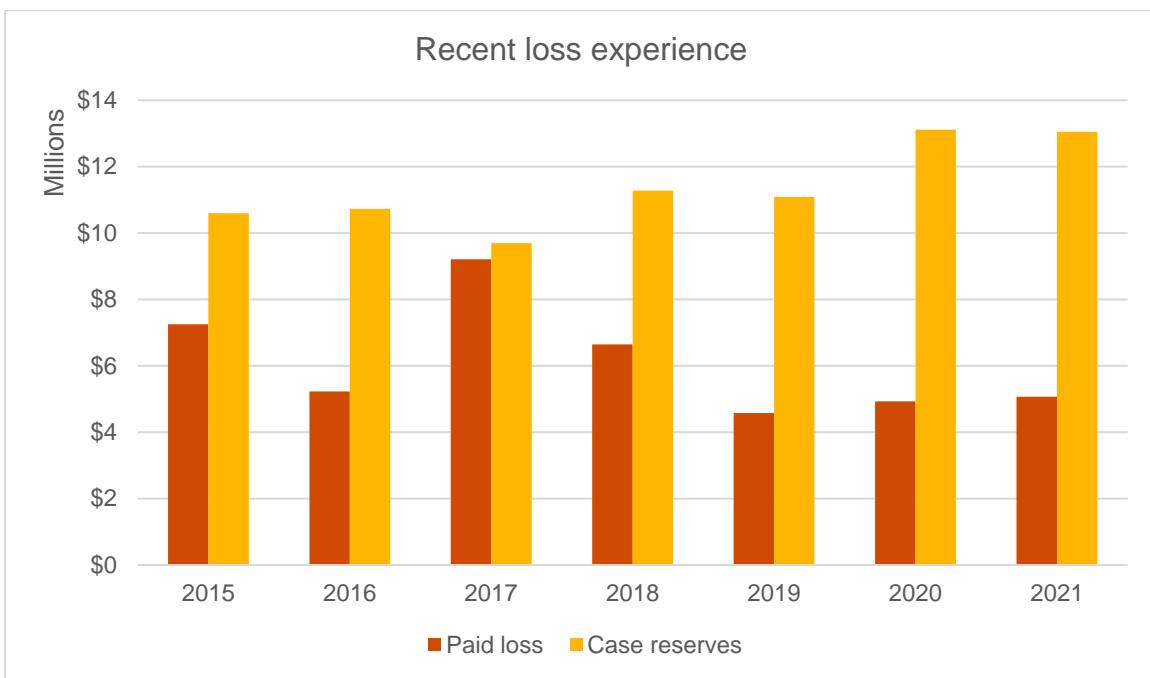

Unpaid claim estimate

The Pool's unpaid claim estimate net of self-insured retentions and net of deductibles as of the December 31, 2021 year-end is approximately \$21.6 million. This is roughly \$0.4 million (1.9%) lower than the estimate made as of the December 31, 2020 year-end. Table 4 presents the components of the aggregate unpaid claim estimate and compares them with those from the prior year-end.

Table 4 – Summary of unpaid claim liability
(\$000s)

| Component | 12/31/2020 | 12/31/2021 |
|--|------------|------------|
| 1. Case reserves | 13,114 | 13,054 |
| 2. IBNR reserves | 8,058 | 7,674 |
| 3. Total unpaid case and IBNR [(1)+(2)] | 21,172 | 20,728 |
| 4. ULAE reserves | 844 | 860 |
| 5. Total unpaid claim estimate [(3)+(4)] | 22,016 | 21,588 |

The following chart displays WSTIP's recent loss experience graphically.

Recent payment levels continue to be lower than historical levels. Case reserves as of year-end 2020 and 2021 are slightly higher than those in prior years.

Due to the COVID-19 restrictions beginning in March 2020, mileage levels in 2020 and 2021 were lower than those in prior years. The underlying models used to project losses incorporated these reductions and assumed there would be a corresponding reduction in the claim volume. However, the claim volume reduction observed has been much more

significant than the reduction in mileage would indicate. Over the last two years, the mileage has decreased 24% whereas the claim volume is 55% less.

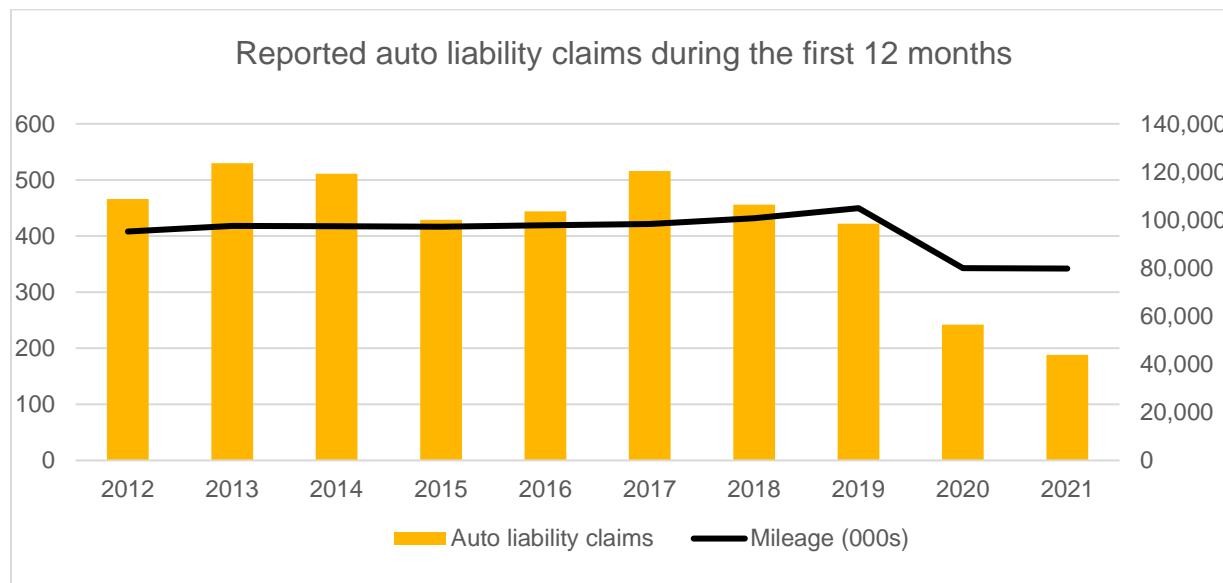

Table 5 provides a reconciliation of the change in the unpaid claim estimate between the December 2020 and the December 2021 year-ends.

Table 5 – Change in unpaid claim estimate
(\$000s)

| | 12/31/2020 | 12/31/2021 |
|--|------------|------------|
| Beginning claim liability (undiscounted) | 19,729 | 22,016 |
| Change in prior year loss estimates | +1,140 | -1,649 |
| New losses incurred | +5,969 | +6,074 |
| VanPool medical expense coverage case reserves | N/A | +20 |
| Net payments during period | -4,932 | -4,889 |
| Change in ULAЕ reserves | +110 | +16 |
| Ending claim liability (undiscounted) | 22,016 | 21,588 |

Losses from prior accident years (2020 and prior) have decreased due to favorable loss developments on several large claims. The ultimate loss for the most recent year is \$6.074 million; this is lower than what was estimated when rates were set (\$8.279 million) and reflects both lower mileage and reduced claim activity.

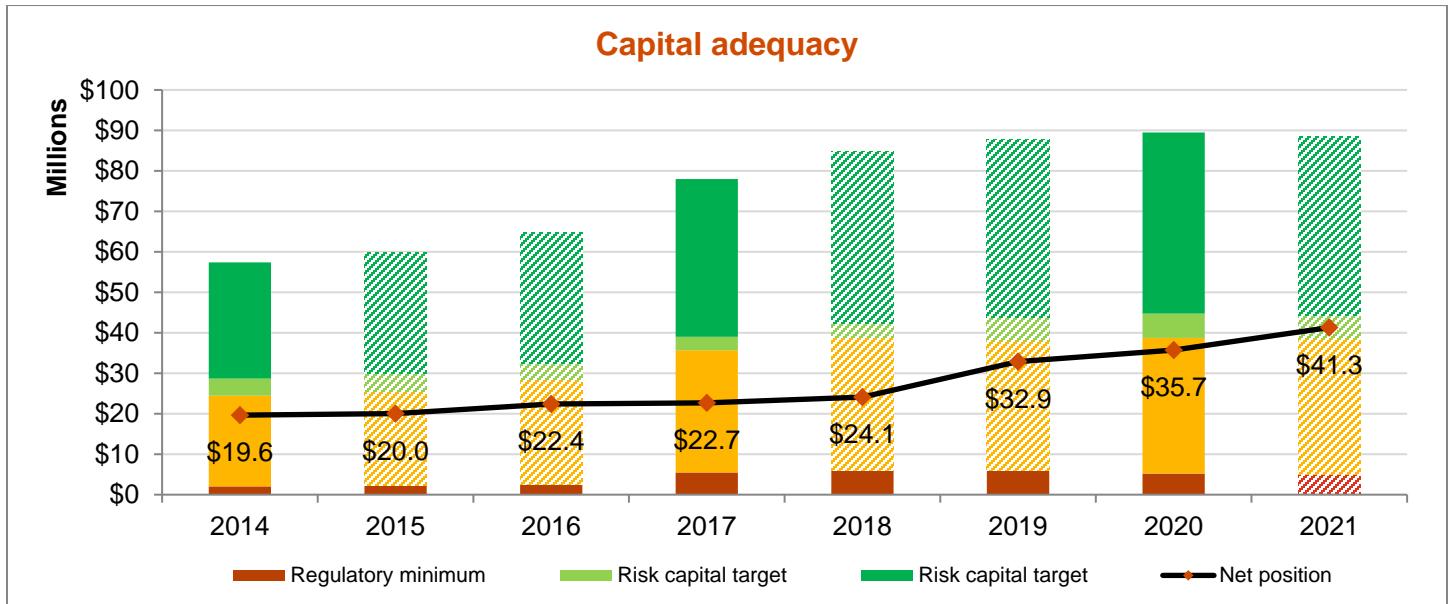

Appendix C of this report presents the historic frequency, severity and loss per exposure rates for WSTIP's automobile liability coverage for losses limited to \$1 million per occurrence. Claim frequency rates (ultimate claims / mileage) decreased during 2020 and 2021 due to the impact of COVID-19 restrictions. However, the financial impact was offset somewhat by the increase in claim severity (average loss). Overall, the loss per exposure (mileage) rates are lower for 2020 and 2021.

Capital adequacy as of December 31, 2021

The Board monitors its capital adequacy by comparing the net position to the following risk capital target ranges:

- Lower bound: 1-in-200 year capital event under current retentions
- Upper bound: 2 times a 1-in-200 year capital event under \$5 million liability retention
- Lighter green zone: 1-in-200 year capital event under \$5 million liability retention

The Pool's risk capital target range for December 31, 2021 fiscal year-end (FYE) is between \$38.6 million and \$88.6 million, with the upper end of the lighter green zone (1-in-200 year capital event under \$5 million liability retention) estimated to be \$44.3 million.

Over the past year, the net position has increased by roughly \$5.6 million. The increase in the net position is driven by:

- A \$2.1 million budgeted increase in the net position when rates were set
- Loss and ULAE estimates for 2020 and prior years have decreased by \$1.6 million due to favorable loss developments on several large claims
- Estimated loss for 2021 was \$2.2 million lower than budgeted for, reflecting both lower mileage and reduced claim activity
- Other cost items were \$1.1 million lower (administrative cost being the main driver) than budgeted for

Partially offsetting these favorable trends was a \$1.4 million reduction in contributions due to lower mileage driven during 2021.

Regulatory minimum

The revised Washington Administrative Code (WAC) 200-100 includes various solvency standards for risk pools in Washington State. Specifically, WAC 200-100-03001 requires pools to obtain an annual actuarial review which provides estimates of the unpaid claims measured at the expected and eighty percent confidence level.

Under the defined solvency standard, the unpaid claims estimate at the expected level is compared to primary assets, which are defined as cash and investments less non-claims liabilities. The second test compares the unpaid claims estimate at the 80% confidence level with primary and secondary assets. Secondary assets mean insurance receivables, real estate or other assets, the value of which can be independently verified by the state risk manager. In each case, the requirement to pass the test is to have more assets than unpaid claims. Table 6 presents the results of the defined solvency tests for the Pool as of December 31, 2021.

Table 6 – Defined solvency standard test results per WAC 200-100-03001

(\$000s)

Test 1

| | |
|--------------------------------|-------------|
| Primary assets | \$55,560 |
| Unpaid claims – expected level | 21,588 |
| Test 1 result | Pass |

Test 2

| | |
|--------------------------------------|-------------|
| Secondary assets | 7,313 |
| Primary + secondary assets | 62,873 |
| Unpaid claims – 80% confidence level | 26,671 |
| Test 2 results | Pass |

The primary and secondary assets presented in Table 7 were provided by WSTIP and have not been audited.

Projected losses and loss adjustment expenses for accident year 2022

The updated 2022 loss and loss adjustment expense estimates assuming property and auto physical damage retentions of \$250,000 per occurrence and a liability retention of \$2 million per occurrence are presented in Table 7 below at a variety of confidence levels. These cost estimates are lower than the estimates made in the June 2021 Rate Study (current expected cost = \$8.95 million versus the prior level of \$9.32 million).

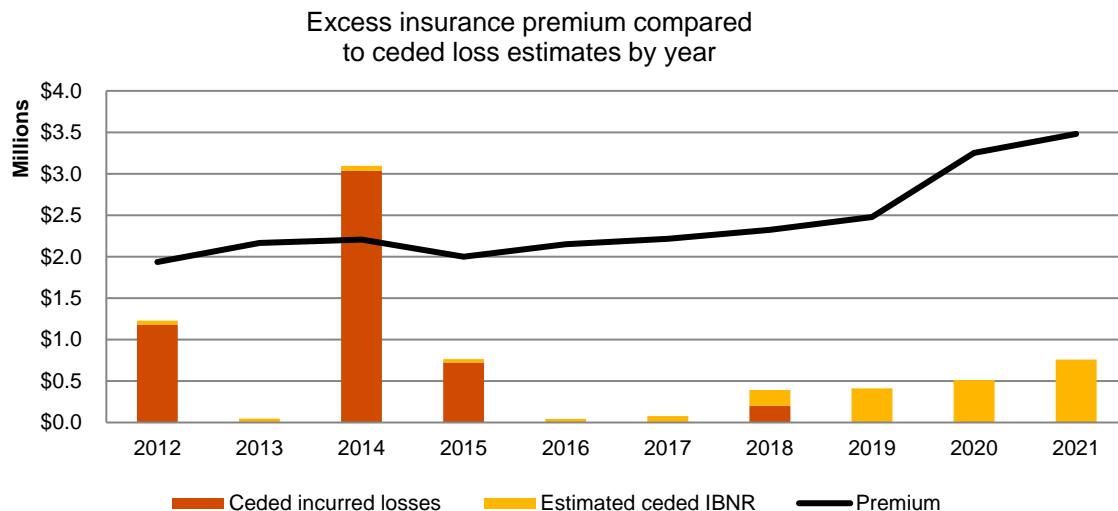

Table 7 – 2022 liability ultimate loss and LAE at \$2 million per occurrence plus property and APD ultimate loss and LAE at \$250,000 per occurrence

| Expected | 60% confidence | 70% confidence | 80% confidence | 90% confidence |
|-----------------|-----------------------|-----------------------|-----------------------|-----------------------|
| \$8,947,334 | \$8,766,156 | \$10,248,266 | \$12,037,787 | \$14,878,858 |

Mileage and employee counts were provided by WSTIP management. Vehicle purchase prices and property values were also provided by the Pool. Vehicle purchase prices have been adjusted for depreciation and for APD deductibles. Property values have been adjusted for property deductibles.

Ceded loss estimates

Estimates of the Pool's ceded ultimate loss (claim costs above the self-insured retention level) by year and by coverage are included in Appendix A-2 to A-5 of this report. The excess loss estimates may be compared with the Pool's excess premium by year to gain a better understanding of the extent of WSTIP's reliance upon excess insurance for its current cost structure; this comparison is presented on the table in Appendix A-1 and graphically in the following chart. There are several auto liability claims from 2012, 2014 and 2015 which have exceeded the Pool's retention limit. In addition, during 2018, the Pool incurred one large APD claim that exceeded the retention level.

Reliance on data

The data used throughout this report is the responsibility of the Pool. PwC assumes no responsibility and makes no representations with respect to the accuracy or completeness of the information provided. While our work involved reviewing the data for reasonableness and consistency, our actuarial engagement does not include an audit in accordance with generally accepted auditing standards. To the extent that any changes are noted that could potentially have a material impact on our analysis, it is the responsibility of the Pool to notify us of these changes so that they may be properly reflected.

Data provided by the Pool included the following:

- Claim listing valued as of December 31, 2021
- Historical and projected exposures (total miles, mileage by mode, number of employees, automobile values, total insured property values)
- Deductibles by transit system, and year
- Self-insured retention history
- Other financial information of the Pool

Disclosures

Distribution and use

This report was prepared for internal use by the management of the Pool, and not for any other party. Use of this report for other than the stated purpose may be inappropriate. Distribution of this report to the Pool's external auditors is permitted with the understanding that the report will be distributed in its entirety and that the furnishing of this report is not a substitute for the auditor's own due diligence. Judgments as to the conditions, methods, and data contained in this report should be made only after studying the report in its entirety and understanding the reliance and limitations inherent in the analysis, as described in the subsequent sections. The use of parts of this report in isolation may result in erroneous or misleading conclusions. The Actuarial Services staff of PwC is available to explain or elaborate upon the findings presented in this report, and it is assumed that users of this report will seek out such explanation on any matter in question. Further distribution of this report is not permitted without the written permission of PwC. Other use or further distribution of this report will not result in the creation of any duty or liability by PwC to a third party, and third parties should place no reliance on this report or data contained herein that would result in the creation of any duty or liability by PwC to the third party.

Qualifications of the actuaries

Kevin Wick is a Managing Director with PwC, a Fellow of the Casualty Actuarial Society and a member of the American Academy of Actuaries. Peipei Zhou is a Manager with PwC and is a Fellow of the Casualty Actuarial Society. Christine Kogut is a Principal with PwC, a Fellow of the Casualty Actuarial Society and a member of the American Academy of Actuaries. As such, Mr. Wick, Ms. Zhou and Ms. Kogut each meet the Qualification Standards of the American Academy of Actuaries to provide the results contained herein.

Christine Kogut was the peer reviewer for this engagement.

Limitations

The projected ultimate liabilities and associated reserves for loss shown in this report are actuarial central estimates. As estimates, these values are subject to inherent variability. The possibility of this variability arises from the fact that all factors affecting the ultimate liability for loss have not taken place and cannot be evaluated with absolute certainty. Such factors may include, but are not limited to, unanticipated changes in claimant attitudes toward filing claims or settling claims, the long period over which claims may persist until settlement, and the potential for large claims. We have not anticipated any extraordinary changes in the legal, social, or economic environment which might affect the claim experience. Our estimates make no provision for the future emergence of new classes of losses or types of loss not sufficiently represented by historical loss experience or which are not yet quantifiable. We have, however, used methods of estimating reserve requirements that we believe produce reasonable results given current information. No guarantee, either express or implied, should be inferred that losses and loss adjustment expenses will develop as shown in this report.

Our work, using models, has the intended purpose of estimating unpaid claims and projecting future losses. There are various assumptions developed and used within our models. These include: the reliance on loss development factors, the selection of expected loss rates, and the selection of ultimate losses from among various methods. These assumptions are not materially inconsistent. The aggregation of assumptions within the individual models described in this report yields reasonable output for the individual models. The aggregation of the models yields reasonable output for the intended purpose.

Some assumptions material to this analysis were made concerning projected exposures. Projected mileage, number of employees, automobile values, and insured property values for accident year 2022 reflect WSTIP's expected membership and exposure levels as of December 31, 2021. To the extent the growth of the Pool is greater or less than the current projection for accident year 2022, the exposures and the associated loss estimates will need to be adjusted.

PwC completed a target capital review for the Pool using data valued as of December 31, 2020. The target funding ranges used in this report are based on that study. We have assumed that much of WSTIP's projected risk profile as of the current year-end is comparable to their risk profile as of the 2020 year-end.

COVID-19 was declared a pandemic by the World Health Organization (WHO) on March 11, 2020. The degree to which WSTIP's claims are impacted is highly uncertain. The unprecedented nature of the pandemic, its potential impact on claims experience, and the uncertainty associated with actions to temper its impact increase the uncertainty.

Methodology

Ultimate loss estimation

The ultimate loss estimates in this analysis are valued as of December 31, 2021. In developing the loss reserve estimates shown in this report, PwC first projected net paid and incurred losses to estimated ultimate values using several actuarial methods. A selected ultimate value based on the results of the various projection methods was derived by reviewing the various ultimate estimates and applying actuarial judgment to achieve a reasonable point estimate for the ultimate liability.

The following actuarial methods used in estimating ultimate losses:

- Paid loss development
- Incurred loss development
- Loss per exposure
- Bornhuetter-Ferguson using exposures and paid loss
- Bornhuetter-Ferguson using exposures and incurred loss
- Average loss

Paid loss development assumes that the ratio of losses paid in one period to losses paid in an earlier period is approximately constant over time. For example, if, on average, paid losses at 24 months after the start of the year were 150% of losses at 12 months, loss development from 12 to 24 months is projected to be 50%. Similarly if losses at 36 months were 120% of losses at 24 months, then the combined loss development from 12 to 36 months is projected to be 80% ($1.50 \times 1.20 = 1.80$). The process of estimating period-to-period development factors is normally continued until a level of maturity is reached at which point no additional movement is expected.

Incurred loss development is similar to paid loss development but uses incurred losses (paid loss plus case loss reserves) instead of paid losses.

Loss per exposure is used to estimate ultimate loss by multiplying the exposures to loss by estimated losses per exposure. In the loss per exposure method, loss per exposure estimates for several of the more mature years are based on ultimate losses selected from indications of the development methods. These losses are divided by loss exposures to produce losses per exposure for these older years. The losses per exposure are trended to more recent years and then multiplied by exposures to yield ultimate loss estimates for the more recent years.

The Bornhuetter-Ferguson technique based on exposures and paid loss is a variation on the traditional development approach. The basic premise underlying this technique is that loss varies proportionately with exposures. Losses per exposures are selected based on historical loss experience and resulting trends. This is balanced by assuming that only future losses will develop at this rate. The percent of paid loss to ultimate loss implied from the paid loss development method is used to determine what percentage of ultimate loss is yet to be developed. Current losses are added to losses yet to be developed, yielding an estimate for each year. This method is also performed using incurred losses instead of paid losses.

The average loss method is used to estimate ultimate loss by multiplying ultimate number of claims by the estimated average loss per claim (claim severity). Historical claim severities are calculated based on the prior year ultimate loss estimates. The average losses for the most recent periods are judgmentally selected based on the historical severities and then trended to the current cost level. This method is used to estimate auto liability ultimate losses in 2020 and 2021.

The average loss, loss per exposure and Bornhuetter-Ferguson approaches are particularly useful for the more recent years because of their relative stability compared with that of development techniques. Paid loss development factors, in particular, can be very large for the most recent years; a relatively small change in the reporting or payment pattern could significantly distort the calculated result.

Ceded ultimate losses

The estimation of ceded ultimate losses is presented in Appendix A. PwC used a form of the Bornhuetter-Ferguson method in this estimation. For the liability coverages, net ultimate losses were multiplied by excess loss factors to yield expected ceded ultimate loss estimates. The excess loss factors were based on both Pool size-of-loss experience and

industry size-of-loss experience. Industry ceded incurred development patterns were used to estimate the relativity between the Pool's actual ceded incurred loss (based on per occurrence limits) and the expected ceded ultimate loss estimate developed to date. The expected ceded ultimate loss estimates were multiplied by the selected relativity and the percentage of ceded loss yet to be developed to yield the estimated ceded ultimate loss; this estimate accounts for the portion of ceded ultimate loss that is in excess of the self-insured retention limits. For the auto physical damage and property coverages, net incurred loss development (instead of industry ceded incurred loss development estimates) was used in the estimation.

Unallocated loss adjustment expense estimation

Unallocated loss adjustment expenses were estimated using a method based on the ratio of paid ULAE to paid loss and ALAE. A selected ULAE to loss and ALAE ratio is applied to loss and ALAE reserves, making the assumption that some of ULAE payments are made when a claim is reported and the remaining part as the claim is paid. Therefore, the whole ratio is applied to "pure" IBNR reserves, while only a portion of the ratio is applied to development on reported claims. Two scenarios were constructed using the assumptions that 0% and 100% of the estimated IBNR loss reserves is attributable to IBNR claims. Based on the range of estimates provided, a total ULAE reserve was selected. Once the ULAE reserve was estimated, the ratio of the ULAE reserve to the loss and ALAE reserve could be calculated.

Claim counts

The following actuarial methods were used to project ultimate claims:

- Reported claim development;
- Claim frequency; and
- Bornhuetter-Ferguson

Reported claim development is similar to paid loss development but uses reported claims (closed claims plus open claims) instead of paid losses.

The Bornhuetter-Ferguson method is similar to what is used to project ultimate loss estimates but uses exposures and reported claims (instead of losses).

Claim frequency is used to estimate ultimate claims by multiplying exposures to loss by estimated claims per exposure. In this method, the claim frequency estimate for the most mature years are based on the ultimate claims selected from indications of the reported claim development method. These claims are divided by loss exposures to produce claims per exposure for the older years. Based on these historical claim frequencies, a frequency rate is selected for the most recent year and then multiplied by exposures to yield the ultimate claim estimate for the most recent year.

Projected future losses

The projected future ultimate losses were estimated at several retention levels based on a loss per exposure approach. Using the Pool provided exposures and limited ultimate loss estimates from prior accident years (limited to \$1 million for auto liability and to \$250,000 for general liability), historical estimated loss rates were calculated. For auto liability (mileage) it was assumed that average costs would exceed annual increases in mileage by 3% per year. For general liability (number of employees), it was assumed that loss costs would increase at a rate of 4% per year. Based on the historical indications and trends, estimated losses per exposure were projected for the prospective year at the respective limited retention levels. Projected exposures were then multiplied by the projected loss rates and increased limits factors to estimate ultimate loss at the various retention levels.

In estimating future losses, no adjustment was made for the liability deductibles. Auto liability deductibles have not been offered since 2007. A \$5,000 deductible is available for public officials liability, but this type of claim has been infrequent historically.

For first-party losses, the method used to project losses was similar to that utilized to estimate liability losses. However, due to the fact that the first-party claims data is net of deductibles, the Pool's estimated exposure (vehicle/property values) was adjusted for the varying deductible levels within the membership. In this manner, first-party loss rates gross of deductibles could be estimated and trended to current levels. Historical loss rates were calculated based on current estimates of ultimate loss. Based on these indications, estimated loss rates were selected for the prospective years. The exposure bases for both property (insured values) and auto physical damage (vehicle values) are inflation sensitive. As such, no other trend rate was used in the loss rate estimation. It was assumed that loss costs would increase at the same

rate as the exposure bases used. The loss rates were then adjusted to the expected retention level. Multiplying the projected loss rate by the projected exposure (and increased limits factors) results in the projected ultimate loss.

Conclusion

We appreciate the opportunity to provide our services to Washington State Transit Insurance Pool. We hope this analysis provides useful guidance. We are available to answer questions on the material presented in this report.

Washington State Transit Insurance Pool

Estimate of Assets and Liabilities

As of December 31, 2021

| | |
|---|--------------|
| (1) Estimated Assets (unaudited) | \$66,800,655 |
| (2) Outstanding Claims Liability (undiscounted) | 20,728,068 |
| (3) Outstanding ULAЕ Reserves (undiscounted) | 860,000 |
| (4) Other Liabilities (unaudited) | 3,927,648 |
| (5) Total Liabilities [(2) + (3) + (4)] | 25,515,716 |
| (6) Estimated Member Fund Balance [(1) - (5)] | 41,284,939 |

1. Lines (1) and (4) were provided by WSTIP.
2. Line (2), column (1) is from Exhibit 1-2, total column (6).
3. Line (3), column (1) is from Exhibit 1-3, line (13).
4. Estimated assets in line (1) include fixed assets.

| 2021 | 6,094,000 | 1,010,167 | 5,083,833 | 1,102,518 |
| Subtotal | 117,958,792 | 97,230,724 | 20,728,068 | 7,679,596 |
| 2022 | 8,341,500 | | 8,341,500 | 1,418,055 |
| Total | 126,300,292 | 97,230,724 | 29,069,568 | 9,097,651 |

1. Loss amounts are net of self-insured retentions and net of deductibles.
2. Column (1) is the sum of the ultimate estimates from Exhibit 1 of sections 3 through 6 for all years through 2021. The 2022 line in column (1) is the sum of the estimated 2022 automobile and general liability ultimate losses from Exhibits 2-1 and 2-2, and the estimated calendar year 2022 APD and property ultimate losses based on Exhibits 2-3 and 2-4.
3. Column (2) is the sum of column (1) from Exhibit 1 of sections 3 through 6.
4. Column (4) is based on columns (1) and (2) and the payment pattern on Exhibit 1-5.
5. The estimated total for column (4) should be considered highly variable due to the timing and volatility of potential settlement amounts for several large, open claims.

1. Property values in columns (1) and (8) have been adjusted for property deductibles. Actual and projected property values were provided by WSTIP.
2. Column (2) is from Exhibit 6-2.
3. Column (10) is based on Pool size-of-loss information and is supplemented by industry size-of-loss information.
4. Columns (9) and (11) are rounded to the nearest thousand.
5. 2022-23 estimated property values are assumed to be 3% higher than those of 2021-22.

1. Column (1) is from Exhibit 3-3.
2. Column (2) is from Exhibit 3-6.
3. Column (3) is from Exhibit 3-9.
4. Column (4) is from Exhibit 3-10.
5. Column (5) is from Exhibit 3-11.
6. Column (6) is from Exhibit 3-15.
7. Column (8) is based on the Pool's losses at various limits supplemented by industry size-of-loss information.
8. Column (10) is based on the Pool's loss experience from the net layer in excess \$1 million and on industry excess loss development patterns.
9. Column (12) was provided by the Pool.
10. Selected amounts in column (13) are based on a review of the actual experience and the excess experience that is expected to develop.

Selected Loss per Exposure:

56.0

1. Columns (1), (3) and (5) were provided by Pool management.

2. Columns (6) and (7) are from Exhibits 3-3 and 3-6.

3. Loss per exposure in column (12) is selected based on the averages in columns (10) and (11). A 3% trend is used to discount the selected loss per exposure over time; this trend is based on both pool and industry experience.

- Column (1) is from Exhibit 4-3.
- Column (2) is from Exhibit 4-6.
- Column (3) is from Exhibit 4-9.
- Column (4) is from Exhibit 4-10.
- Column (5) is from Exhibit 4-11.
- Column (7) is based on the Pool's losses at various limits supplemented by industry size-of-loss information.
- Column (9) is based on the Pool's loss experience from the net layer in excess \$250,000 and on industry excess loss development patterns.
- Column (11) was provided by the Pool.
- Selected amounts in column (12) are based on a review of the actual experience and the excess experience that is expected to develop.

1. Exposures are number of employees.
2. Losses are net of deductibles and limited to \$250,000 per occurrence.
3. Selected development factors are based on industry trends in the State of Washington.

Selected Loss per Exposure:

140.0

1. Columns (1), (3) and (5) were provided by Pool management.
2. Columns (6) and (7) are from Exhibits 4-3 and 4-6.
3. Loss per exposure in column (12) is selected based on the averages in columns (10) and (11). A 4% trend is used to discount the selected loss per exposure over time.

1. Columns (1), (3) and (5) were provided by Pool management.

2. Columns (6) and (7) are from Exhibits 5-3 and 5-6.

3. Loss per exposure in column (12) is selected based on the averages in columns (10) and (11). No trend is used in column (12) since it is assumed that vehicle losses and vehicle values change at the same rate over time.

Selected Loss per Exposure:

145

1. Columns (1), (3) and (5) were provided by Pool management.

2. Columns (6) and (7) are from Exhibits 6-3 and 6-6.

3. Loss per exposure in column (12) is selected based on the averages in columns (10) and (11). No trend is used in column (12) since it is assumed that property losses and property values change at the same rate over time.
